

Mentor Meeting 3 Progress Report

- We built a functional version of our project. It's rough around the edges, but it works and it fulfills the purpose
- Built socket live chat for online chatting
- We currently are listing other users when searching for people to chat with. This will set us up for searching by language.
- Built offline chat too
- Built out data model using Mongoose
- Built a template UI, but didn't have time to wire it up with the backend
- Set up authentication with passport
- Deployed on Openshift!
 - <http://pangaea-paerhati.rhcloud.com/>
- Also did extra things that we thought would be due:
 - Wrote specs for most methods
 - Updated design doc
 - Wrote data design
 - Updated design challenges
- Still have to:
 - Make it look pretty
 - Make sandbox translation box in live chat via Bing Translate API
 - Build search (or possibly other matching process)
 - Allow for reporting users
