

Mentor Meeting 2 Progress Report

- We used the the beginning of the week to finish the design document and teamwork plan. The work was divided as we said it would be last meeting. Also Eben made everything look nice :)
- We have a start to our project set up with openshift
- We also have a basic mongoose model set up for users
- Authorization is almost set up too
- We have all of our ideas sketched out (i.e. wireframes) and have decided on how to implement nearly all of our features; what we haven't decided on will be on the agenda so we can get input
- We plan to discuss the project at today's meeting. Additionally, we plan to meet tomorrow to start taking on the bulk of the implementation.
- We have decided on using certain tools:
 - Express
 - Mongoose
 - WebRTC
 - Bing translate

We might use more tools once we get our basic app going, but those decisions are for a later time.
